

Let us be your **advocate**.

The MIL Corporation (MIL) works hard to be your independent, software agnostic, and trusted partner. Our team helps federal executives develop and deliver systems and applications that meet strategy, goals, objectives, and business outcomes within planned scope, cost, and schedule. MIL stands apart by advocating for your needs – not proprietary or packaged solutions - bridging the efforts of integrators, developers, and federal staff to make your goals a reality.

How we can help.

Organizational

- » Develop a complete inventory of projects, systems, and technologies and how they align to strategy and each other
- » Integrate disparate development projects to maximize ROI and eliminate duplicative efforts
- » Adhere to Congressional mandates and oversight requirements and align to Administration priorities and policy
- » Address security requirements throughout SDLC and assist with FedRAMP and Authority-to-Operate (ATO) processes

Technical

- » Rationalize the complex available technology landscape
- » Deliver quality control and assurance through rigorous testing at every release and deployment
- » Provide independent subject matter expert input for interface requirements and partner engagement
- » Oversee development teams' adherence to best practice methodologies and tools (waterfall, agile, hybrid, DevSecOps, CI/CD)
- » Bring distressed implementations back on track – from large, unwieldy systems integrations to niche applications and platform development

Your **advocate** for program management.

Common federal program management challenges & complications

- » Many ongoing, planned, known, and unknown development activities
- » High-risk systems or application development activities
- » Off track systems or application development projects
- » Limited understanding of how to pursue state of the art technology

Our industry certified organizational process assets & templates

- » Governance board charter
- » Policy templates
- » Quality work instructions
- » Project lifecycle management
- » Program/project measures
- » Communications management
- » Requirements management
- » Procurement management
- » Scope management
- » Risk management
- » Quality management
- » Staffing management

MIL reduces the risk of scope creep, schedule slippage, and cost overruns by acting as a control mechanism. We ensure integrators & developers deliver what is promised, and that our clients receive desired outcomes on budget and on time.

MIL product management processes aligned to SDLC

MIL drives results!

- » Systems and applications delivered according to plan that meet user's needs
- » Lower cost of process & product development
- » Increased quality, reduced rework, and higher user satisfaction
- » Empowered and qualified workforce
- » Proactive risk identification and mitigation
- » Reportable and supportable success!

Your **advocate** for system integration.

We are the independent program management, testing, and compliance leader in the federal marketplace. The only stake we have is YOUR best interests and success.

After years of cost overruns and delays, MIL assumed program management of two distressed financial system implementations for a globally dispersed agency with 13,000+ active users/100,000+ impacted employees and fully integrated these systems within the revised scope, schedule, and budget.

In one year for a large component of a cabinet-level agency, MIL provided quality assurance for 191 software releases across 20+ financial systems resulting in user satisfaction ratings in excess of 90%.

For a multi-billion dollar agency, MIL stood up an enterprise-wide automation program, managed the ATO and deployment for the first Robotics Process Automation (RPA) and Artificial Intelligence (AI) platforms at the agency, and managed a pipeline of more than 100 use cases saving this client 55,000+ FTE hours annually.

MIL performed a Financial Management System Strategic Study for a Legislative Branch agency by applying industry best practices for analysis and recommendations, and assessing the feasibility, risk, and performance of different financial management program alternatives.

Experience & Expertise.

A Trusted Partner

- » 44 years in services
- » 850 skilled professionals
- » 300+ professionals with core financial and feeder system experience
- » 500+ professionals cleared at Secret or above
- » 25+ federal agency locations
- » 35+ federal contracts

Federal Financial Management System Support

- » CGI Momentum
- » Oracle Financials/E-Business Suite
- » Unison PRISM
- » PeopleSoft HR & Global Payroll
- » eGovernment Travel Service (Concur/CWT)

Project Management/IT Service Management System Support

- » Atlassian JIRA
- » ServiceNow
- » Micro Focus Application Delivery Management
- » Microsoft SharePoint

Business Intelligence System Support

- » SAP Business Objects
- » Oracle Business Intelligence Enterprise Edition

Cloud/Platform Support

- » UiPath
- » Google Cloud Platform
- » ServiceNow
- » Salesforce
- » Microsoft Azure
- » Amazon Web Services
